Customer Experience: (Pains and Gains)

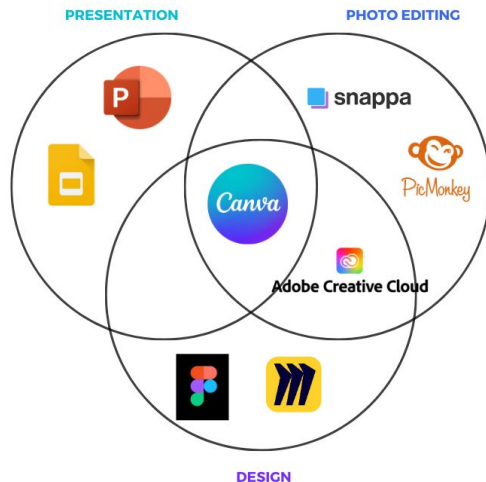

Pains:

1. **Limitations in design features:** While Canva offers a library of design elements, some users feel it is limited in terms of advanced features available to customize design to fit their specific needs. Canva lacks a few design capabilities when compared to other graphic design tools.
2. **Price:** For users who require advanced features, the cost of Canva Pro or Canva Enterprise can be a significant investment.
3. **Limited export options:** Some users have reported limitations in terms of the export options available in Canva, such as not being able to export designs in certain file formats or with certain resolutions.
4. **Slow performance:** Some users have reported that Canva can be slow or laggy, especially when working with large or complex designs.
5. **Print:** Some users complain that their artwork looks nothing like what they had designed due to low resolution pngs that blow up with terrible pixelation since everything is done in RGB. Print shops also complain of dealing with Canva files, since they are difficult to print correctly.

Gains:

1. **User-friendly interface:** Canva's interface is designed to be user-friendly, making it easy for people with little to no design experience to create professional-looking designs.
2. **Integrations with other tools and platforms:** Canva integrates with a range of other tools, including social media platforms and project management tools, making it easier for users to share their designs and collaborate with others.
3. **User community:** Canva has a large and active user community, which can be a valuable resource for users looking for tips and inspiration for their designs.
4. **Time-saving:** Canva saves users time by providing a wide range of templates and designs that they can use as a starting point for their own designs. This can be especially helpful for those who are new to graphic design.

Competitor Analysis

- Canva's offerings, as we can see from the diagram, are extremely varied.
- They have high quality and creative formats for everything design related.
- And yet, MS PowerPoint, Google Slides, Adobe Creative Cloud and Figma are arguably the preferred choice of a majority of customers.

Why does this happen?

- Figma, for example, is great at what they offer. It is the place any designer would go despite their steep learning curve.
- PowerPoint and Google Slides - Corporates have invested in traditional suites and would rather work with applications that have been around for longer than "waste" time on something new.
